Federal Aviation Administration, Washington, DC 20591

June 21, 2016

SUMMARY OF SMALL UNMANNED AIRCRAFT RULE (PART 107)

Operational Limitations	<ul style="list-style-type: none">• Unmanned aircraft must weigh less than 55 lbs. (25 kg).• Visual line-of-sight (VLOS) only; the unmanned aircraft must remain within VLOS of the remote pilot in command and the person manipulating the flight controls of the small UAS. Alternatively, the unmanned aircraft must remain within VLOS of the visual observer.• At all times the small unmanned aircraft must remain close enough to the remote pilot in command and the person manipulating the flight controls of the small UAS for those people to be capable of seeing the aircraft with vision unaided by any device other than corrective lenses.• Small unmanned aircraft may not operate over any persons not directly participating in the operation, not under a covered structure, and not inside a covered stationary vehicle.• Daylight-only operations, or civil twilight (30 minutes before official sunrise to 30 minutes after official sunset, local time) with appropriate anti-collision lighting.• Must yield right of way to other aircraft.• May use visual observer (VO) but not required.• First-person view camera cannot satisfy “see-and-avoid” requirement but can be used as long as requirement is satisfied in other ways.• Maximum groundspeed of 100 mph (87 knots).• Maximum altitude of 400 feet above ground level (AGL) or, if higher than 400 feet AGL, remain within 400 feet of a structure.• Minimum weather visibility of 3 miles from control station.• Operations in Class B, C, D and E airspace are allowed with the required ATC permission.• Operations in Class G airspace are allowed without ATC permission.• No person may act as a remote pilot in command or VO for more than one unmanned aircraft operation at one time.• No operations from a moving aircraft.• No operations from a moving vehicle unless the operation is over a sparsely populated area.• No careless or reckless operations.• No carriage of hazardous materials.
--------------------------------	--

	<ul style="list-style-type: none"> • Requires preflight inspection by the remote pilot in command. • A person may not operate a small unmanned aircraft if he or she knows or has reason to know of any physical or mental condition that would interfere with the safe operation of a small UAS. • Foreign-registered small unmanned aircraft are allowed to operate under part 107 if they satisfy the requirements of part 375. • External load operations are allowed if the object being carried by the unmanned aircraft is securely attached and does not adversely affect the flight characteristics or controllability of the aircraft. • Transportation of property for compensation or hire allowed provided that- <ul style="list-style-type: none"> ○ The aircraft, including its attached systems, payload and cargo weigh less than 55 pounds total; ○ The flight is conducted within visual line of sight and not from a moving vehicle or aircraft; and ○ The flight occurs wholly within the bounds of a State and does not involve transport between (1) Hawaii and another place in Hawaii through airspace outside Hawaii; (2) the District of Columbia and another place in the District of Columbia; or (3) a territory or possession of the United States and another place in the same territory or possession. • Most of the restrictions discussed above are waivable if the applicant demonstrates that his or her operation can safely be conducted under the terms of a certificate of waiver.
<p>Remote Pilot in Command Certification and Responsibilities</p>	<ul style="list-style-type: none"> • Establishes a remote pilot in command position. • A person operating a small UAS must either hold a remote pilot airman certificate with a small UAS rating or be under the direct supervision of a person who does hold a remote pilot certificate (remote pilot in command). • To qualify for a remote pilot certificate, a person must: <ul style="list-style-type: none"> ○ Demonstrate aeronautical knowledge by either: <ul style="list-style-type: none"> ▪ Passing an initial aeronautical knowledge test at an FAA-approved knowledge testing center; or ▪ Hold a part 61 pilot certificate other than student pilot, complete a flight review within the previous 24 months, and complete a small UAS online training course provided by the FAA. ○ Be vetted by the Transportation Security Administration. ○ Be at least 16 years old. • Part 61 pilot certificate holders may obtain a temporary remote pilot certificate immediately upon submission of their application for a permanent certificate. Other applicants will obtain a temporary remote pilot certificate upon successful completion of TSA security vetting. The FAA anticipates that it will be able to issue a temporary remote pilot certificate within 10 business days after receiving a completed remote pilot certificate application. • Until international standards are developed, foreign-

	<p>certificated UAS pilots will be required to obtain an FAA-issued remote pilot certificate with a small UAS rating.</p> <p>A remote pilot in command must:</p> <ul style="list-style-type: none"> • Make available to the FAA, upon request, the small UAS for inspection or testing, and any associated documents/records required to be kept under the rule. • Report to the FAA within 10 days of any operation that results in at least serious injury, loss of consciousness, or property damage of at least \$500. • Conduct a preflight inspection, to include specific aircraft and control station systems checks, to ensure the small UAS is in a condition for safe operation. • Ensure that the small unmanned aircraft complies with the existing registration requirements specified in § 91.203(a)(2). <p>A remote pilot in command may deviate from the requirements of this rule in response to an in-flight emergency.</p>
Aircraft Requirements	<ul style="list-style-type: none"> • FAA airworthiness certification is not required. However, the remote pilot in command must conduct a preflight check of the small UAS to ensure that it is in a condition for safe operation.
Model Aircraft	<ul style="list-style-type: none"> • Part 107 does not apply to model aircraft that satisfy all of the criteria specified in section 336 of Public Law 112-95. • The rule codifies the FAA's enforcement authority in part 101 by prohibiting model aircraft operators from endangering the safety of the NAS.

Federal Aviation Administration

Recreational Flyers & Modeler Community-Based Organizations

You are considered a recreational user if you fly your drone for fun. It is important to know when and where you can fly and how to register your drone.

New Changes to Recreational Drone Flying in the United States

There's a [new law \(https://www.congress.gov/115/bills/hr302/BILLS-115hr302enr.pdf\)](https://www.congress.gov/115/bills/hr302/BILLS-115hr302enr.pdf) (PDF) that describes how, when, and where you can fly drones for recreational purposes. Following these rules will keep you and your drone safe and will help keep the airspace available to everyone.

Here's what you need to do:

1. [Register your drone \(www.faa.gov/uas/getting_started/register_drone/\)](http://www.faa.gov/uas/getting_started/register_drone/) , [mark it on the outside with the registration number \(www.faa.gov/uas/getting_started/register_drone/media/UAS_how_to_label_Infographic.pdf\)](http://www.faa.gov/uas/getting_started/register_drone/media/UAS_how_to_label_Infographic.pdf) (PDF), and carry proof of registration with you.
2. Fly only for recreational purposes.
3. Follow the safety guidelines of a community based organization.
4. **Fly your drone at or below 400 feet when in uncontrolled or "Class G" airspace.** This is airspace where the FAA is not controlling manned air traffic. To determine what type of airspace you are in, refer to the mobile application that operates your drone (if so equipped) and/or use other drone-related mobile applications. Knowing your location and what airspace you're in will also help you avoid interfering with other aircraft.
5. **Do NOT fly in controlled airspace (around and above many airports) unless:**

- a. You receive an airspace authorization for operations in controlled airspace through LAANC (Low Altitude Authorization and Notification Capability (www.faa.gov/uas/programs_partnerships/data_exchange/)), before you fly. Learn more about approved LAANC UAS Service Suppliers (www.faa.gov/uas/programs_partnerships/data_exchange/) for recreational flyers.
- b. You are flying at a recreational flyer fixed site that has a written agreement with the FAA. The FAA has posted a list of approved sites ([new_changes_recreational_uas/media/AMA_Flying_Fields_Initial_Publication.xlsx](#)) (MS Excel) and has depicted them as blue dots on a map. Each fixed site is limited to the altitude shown on this map, which varies by location.

NOTE: If your organization is interested in establishing a letter of agreement for a fixed flying site, please contact us at 9-AJT-UAS-Integration@faa.gov.

The FAA is experiencing a high volume of requests for fixed sites. At this time, the FAA is reviewing requests based on available resources.

6. **Keep your drone within your line of sight**, or within the visual line-of-sight of a visual observer who is co-located and in direct communication with you.
7. **Do NOT fly in airspace where flight is prohibited.** Airspace restrictions can be found on our interactive map, and temporary flight restrictions can be found here (<https://tfr.faa.gov/tfr2/list.html>). Drone operators are responsible for ensuring they comply with all airspace restrictions.
8. Never fly near other aircraft, especially near airports.
9. Never fly over groups of people, public events, or stadiums full of people.
10. Never fly near emergencies such as any type of accident response, law enforcement activities, firefighting, or hurricane recovery efforts.
11. Never fly under the influence of drugs or alcohol.

Recreational flyers should know that if they intentionally violate any of these safety requirements, and/or operate in a careless and reckless manner, they could be liable for criminal and/or civil penalties.

Read the Authorization for limited recreational operations as described in section 44809 ([new_changes_recreational_uas/media/44809_authorization.pdf](#)) (PDF). All limited recreational operations should be conducted in accordance with this authorization.

For more information, read [Advisory Circular 91-57B](#)

(https://www.faa.gov/regulations_policies/advisory_circulars/index.cfm/go/document.information/documentID/103602)

Changes Coming in the Future

The new law also requires:

1. Drone operators to pass an online aeronautical knowledge and safety test and carry proof of test passage.
2. The FAA to issue guidance for how it will recognize community based organizations.

The FAA is incrementally rolling out these features and requirements.

Check our [website \(www.faa.gov/uas/\)](http://www.faa.gov/uas/) for the latest updates or follow us on [social media \(www.faa.gov/news/stay_connected/\)](#) for the latest news.

More detailed information about the FAA's plan to fully implement the requirements of Section 349 of the FAA Reauthorization Act of 2018 may be found on the [Federal Register \(https://www.federalregister.gov/documents/2019/05/17/2019-10169/exception-for-limited-recreational-operations-of-unmanned-aircraft\)](#) .
